

# What is LVis?

LVis is a graphical user interface for ORTECs GammaVision® Gamma-Ray Spectrum Analysis and MCA Emulator software (A66-BW), designed for use in counting laboratories.

LVis is an *application manager* product. It uses the underlying software components of *GammaVision* to control acquisition hardware, and to manage the gamma spectroscopy samples in a counting laboratory. The analysis itself is performed using the tried-and-tested analysis capabilities of *GammaVision* itself. *LVis* provides a sophisticated sample automation environment to control acquisitions and analyses based upon pre-determined *parameter sets* which allow entry of sample-specific data by a technician as needed, while pre-loading automatically that information which can pre-specified by an expert or supervisor. Because *LVis* relies on core functions within *GammaVision*, the two applications must be used together.
